COMPETENCIES

- Technical Leadership & Team Management
- Engineering and Software Development
- Solution Architecture and System Design
- Coding and production troubleshooting
- Critical Thinking
- AI coding assistants and LLM-based tools

LANGUAGES

- English (B2+)
- Ukrainian (native)
- Polish (Basic)

PROFESSIONAL SUMMARY

Java backend engineer and technical leader with 9+ years of experience building scalable business applications and distributed systems, leading engineering teams, and delivering business-critical platforms across multiple domains. I specialize in backend development, microservices architecture, reactive programming, and technical leadership.

Most recently, I served as a Java Team Lead and Solution Architect for a high-load Remote Gaming Server platform, leading a team of seven backend engineers while remaining hands-on with architecture, development, delivery, mentoring, and production troubleshooting.

Designed, implemented and supported platforms handling tens of millions of business transactions per day, with integrations across dozens of operators and hundreds of games. Previous domain experience includes AI-driven sales intelligence, healthcare, e-commerce, and SaaS.

SKILLS

Leadership / Management:

- Technical leadership
- Team Management / Cross functional teams collaboration
- Mentoring / Coaching
- Requirements Analysis
- Estimation and Delivery Planning
- Code Reviews
- Technical Roadmap Planning

Programming languages

- Java 8 / 11 / 17 / 19 / 21

Databases

- Postgres, MySQL, Oracle, H2

Messaging / Caching:

- Kafka / RabbitMQ
- Redis, Hazelcast

Methodologies

- Agile, Scrum
- Waterfall

Frameworks / Libraries

- Spring Boot/ Spring WebFlux
- Spring (Cloud/ Web/ Security/ Data)
- Hibernate /JPA/JDBC/R2DBC
- Project Reactor , OpenFeign
- REST APIs / gRPC
- OpenAPI (Swagger), OAuth2, JWT

Architecture/ Design:

- Microservices Architecture
- Distributed Systems
- Monolith Architecture

Cloud / DevOps

- Docker, Kubernetes, Rancher
- AWS, S3
- GitLab CI/CD, Jenkins,
- Maven / Gradle
- Flyway / Liquibase

Testing / Quality

- JUnit, Mockito, AssertJ
- Unit / Integration Testing
- Load testing (k6)
- SonarQube, Checker Framework / Checkstyle

WORK EXPERIENCE

Java Team Lead / Solution Architect

2023 - 2026

EveryMatrix (<https://everymatrix.com/>)

RGS | Remote Gaming Server Platform

Led backend development for a business-critical RGS platform used by gaming operators and game providers worldwide.

- Led a team of 7 engineers and owned architecture, technical planning, delivery of business-critical platform features and production troubleshooting
- Designed and delivered reactive Java microservices processing tens of millions of business transactions per day while maintaining stable performance during major traffic spikes.
- Significantly reduced the risk of losing completed or partially processed rounds and enabled reliable recovery after application, network, or database failures by designing and implementing a Kafka-based recovery mechanism with durable round events, manual acknowledgements, idempotent processing, and dedicated topics for failed events and controlled reprocessing. Improved data consistency across the RGS, operator transactions, and downstream reporting systems.
- Optimized multi-billion-row MySQL tables by redesigning reporting around pre-aggregated statistics, introducing hot/cold data retention, date-based partitioning, and InnoDB compression, reducing active database size, read-replica load, replication lag, and operational risk.
- Designed and delivered complex iGaming business logic across wallet, bet, win, refund, jackpot, promotion, and free-spin flows, ensuring transactional consistency and correct handling of edge cases.

Technology stack:

Microservice Architecture, Java 17, 19, 21, Spring Boot, Spring WebFlux, Spring Cloud, REST API, gRPC, Reactor, Kafka, MySQL, R2DBC, OpenFeign, Docker, Kubernetes, Rancher, Hazelcast, GitLab CI/CD, Gradle

Senior Software Engineer

2021 - 2023

Exoft (<https://exoft.net>)

Spotlight.ai (<https://www.spotlight.ai/>) US

AI-powered Value Intelligence platform helping sales organizations automate discovery, generate business cases, and optimize value positioning.

- Designed and implemented backend services for a microservices architecture
- Participated in solution architecture and technical design discussions
- Developed integrations with Salesforce CRM
- Delivered new platform features and performance improvements
- Implemented automated testing and quality controls
- Performed code reviews and mentored team members
- Participated in deployment, monitoring, and production support

Technology stack:

Java 11, Microservice Architecture, Spring Cloud, Spring Boot, Spring Security, JPA, REST APIs, Salesforce CRM integration, PostgreSQL, Reactor, Redis, AWS S3, Docker, Mockito, XChart, Apache POI, Thymeleaf, GitLab CI/CD

Software Engineer

2019 - 2021

SoftServe (<https://www.softserveinc.com>)

CompuGroup Medical (CGM) Austria

Large-scale healthcare platform supporting hospitals and medical organizations.

- Developed enterprise software components for healthcare systems
- Participated in architecture and design activities
- Implemented new features and resolved production issues
- Performed code reviews and testing activities
- Collaborated with international teams using Agile methodologies
- Product support and documentation maintenance

Technology stack:

IntelliJ IDEA, Java 8, Monolith Architecture, Helix, Spring, Hibernate, Jenkins, GitLab, MS SQL Server, Oracle, H2, Artifactory, Maven, Sparx Enterprise Architect, Apache JMeter, Confluence, Jira, Scrum

Full Stack Software Engineer

2018 - 2019

DevCom (<https://devcom.com>)

CollegeBom (USA)

Marketplace platform supporting e-commerce, barter exchanges, and auction-based transactions

- Developed REST APIs and business services
- Contributed to application architecture and design
- Implemented Angular frontend functionality
- Participated in requirements analysis and estimation
- Supported deployment and maintenance activities

Technology stack:

Java 8, Spring Boot, Hibernate, JPA, Angular, MySQL, OAuth2, Swagger, Jenkins, Git

Full Stack Software Engineer

2017 - 2018

DevCom (<https://devcom.com>)

Master Planner (Denmark)

Automated Decision Intelligence platform supporting retail decision-making processes

- Developed backend services and web functionality
- Participated in solution design and requirements analysis
- Collaborated closely with stakeholders and team members
- Supported product maintenance and enhancement activities

Technology stack:

Java 7, Spring MVC, Spring Security, Hibernate, JPA, JavaScript, jQuery, MySQL, Jenkins, Git

EDUCATION

Physics - Master degree
Ivan Franko National University
Physics Department Graduated in
2004
